

VELLIQO OWNER COURSE

Automations, permissions and security

Professional step-by-step guide

Configure recommendation levels, understand approvals and keep high-risk actions under owner control.

Workspace route

/dashboard/ai/settings

What you will complete

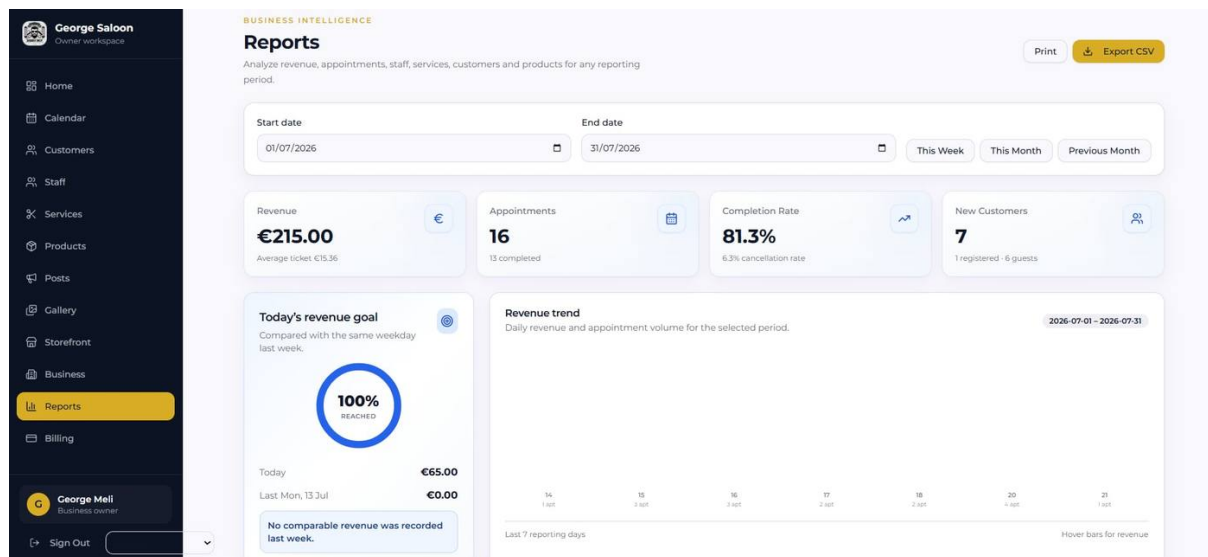

- Open AI Settings and review Manager Automations, action permissions and notification preferences.
- Start with Recommend only. Enable one rule at a time and understand Disabled, Recommend only, Prepare draft and Auto-execute low risk.
- Review run history and audit logs. Confirm campaigns are not sent, appointments are not moved and purchases are not placed without the required approval.

Actual VelliQo application example. Layout may adapt to screen size and selected industry.

Exact workflow

- 1 Open the correct workspace
Open AI Settings and review Manager Automations, action permissions and notification preferences.
- 2 Start the action
Open AI Settings and review Manager Automations, action permissions and notification preferences.

4

Review and confirm

Start with Recommend only. Enable one rule at a time and understand Disabled, Recommend only, Prepare draft and Auto-execute low risk.

5

Verify the result

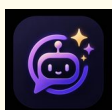

Review run history and audit logs. Confirm campaigns are not sent, appointments are not moved and purchases are not placed without the required approval.

Final owner checklist

✓	Open AI Settings and review Manager Automations, action permissions and notification preferences.
✓	Start with Recommend only. Enable one rule at a time and understand Disabled, Recommend only, Prepare draft and Auto-execute low risk.
✓	Review run history and audit logs. Confirm campaigns are not sent, appointments are not moved and purchases are not placed without the required approval.

If the result is not correct

Do not repeat the action blindly. Re-open the record, confirm the selected business, date, service and professional, and use Velliqo AI or the Contact page with a screenshot of the issue.

Safety and data protection

Use accurate business data. Never place passwords, secret keys, full payment card details or unnecessary sensitive personal information in notes, forms or AI messages.
